

MobileTrak Lite software is the perfect introduction to the capabilities of RF Code technology products.

Features & Benefits

- ◆ *Runs on mobile devices including BlackBerry and devices running the Windows Mobile operating system*
- ◆ *Runs on PCs running Windows XP or Vista*
- ◆ *Use Bluetooth or a USB cable*
- ◆ *Receive tag information for up to 25 RF Code tagged assets*
- ◆ *Perfect for product demonstrations*
- ◆ *Easily locate and inventory assets*

MobileTrak Lite, a small, easy-to-use and easy-to-install mobile tag inventory and search application, enables users to inventory and search for up to 25 tags using a simple to use and understand graphical interface. In "Inventory Mode" the reader will report the 1st 25 tag IDs encountered. The main screen lists a summary of all assets that have been located and enables users to filter the list based on a variety of tag status data (signal strength, motion, tamper, panic, and low battery). Users can also "drill down" into the data gathered from each tagged asset to examine details or to additional information and notes made about the location and status of the asset. Tag ID lists can also be saved, exported, or e-mailed for later use.

This easy-to-use and easy-to-install mobile tag inventory and search application is specifically designed to demonstrate the functionality of RF Code tags and mobile readers,

Mobile Trak Lite also enables users to set the antenna range setting to one of the 8 preset modes. And when searching for a specific tag Mobile Trak Lite uses signal strength indication (SSI) values to provide visual and audible alerts to indicate tagged asset proximity.

MobileTrak Lite enables users to input Tag search information in two ways:

- Manual mode (user manually enters the asset tag IDs using a keyboard or stylus)
- Automatic mode (data is "imported" or e-mailed to the device; no manual input is required)

* The number of assets that can be discovered is limited to approximately 500 assets for each MB of free memory available on the Windows Mobile device.

MobileTrak Lite Specifications

OPERATING SYSTEM INFORMATION	
Blackberry OS	<ul style="list-style-type: none">• Uses the entire screen real-estate on the Blackberry. Screen navigation is like native Blackberry applications• Supports Blackberry OS versions 4.1 and higher• Supports most later models such as the 71xx, 72xx, 75xx, 77xx, 81xx, 87xx, 88xx
Windows Mobile	<ul style="list-style-type: none">• Interface uses the entire screen real-estate on the Windows Mobile. Screen navigation is like native Windows Mobile applications• Supports Windows Mobile 5, Windows Mobile 6 Standard, and Windows Mobile 6 Professional
Windows XP and Windows Vista	<ul style="list-style-type: none">• Interface functionality similar to the Windows Mobile interface• Supports Windows XP SP 2 and Vista• Perfect for product demonstrations. Best used in demonstration mode on XP or Vista with a PC attached to a projector running at 1024x758
